

Gyrr Introduces High Capacity Tape Option for DVMS DVR

In response to customer's increasing need for low cost, long term digital video storage, Gyrr has added a new solution. The DAT option offers high capacity storage for the DVMS line of Digital Video Recorders. The DDS4 DAT drive is available as an option for all DVMS units with SCSI configuration. This allows storage of up to 20GB of DVMS video on a single tape.

Pre-configured systems will be the DVMS 100 or 400 with an internal Extended Capacity SCSI Hard Drive (soon to be 36GB) and the DAT drive in the upper Media slot. Optionally, the DAT is available in external configuration, to easily retrofit existing SCSI systems deployed in the field.

Storage costs using our DAT media are greatly reduced, as low \$1.50/GB. This compared favorably to storage on SCSI Hard drives, which can easily reach \$20/GB. This technology allows customers to archive video for months, even years without tying up expensive, fast depreciating Hard Drives.

DVMS allows for simultaneous recording to Hard Drive and Tape when in Dualstream mode. For record rates above 10 images/second, video can be auto-transferred to tape on a daily basis when recording stops. Local playback on DVMS requires restoration of tape contents to the internal hard disc. However, the new "Media Player" version of DVMS Remote Access Software (v2.27) allows for direct tape playback on a PC with a compatible tape drive. This greatly speeds and simplifies video review, allowing for basic tape shuttle functions like Play, Fast Forward, Rewind and Search. This is a significant achievement, as competitive solutions using DAT require data restoration BEFORE you can view video. RAS v2.27 is scheduled for release on May 15, 2001.

DAT is yet another addition to the multitude of options for the DVMS platform. Customers can easily choose a system that fits their technology requirements, and their budgets. For high performance storage with instant search, customers can choose the DVMS RAID Tower options. For low cost archiving, choose the new DAT option.

Model Version	Model Number	Storage Description	List Price
DVMS 400	DV4-SE-TPD	Fixed Extended Capacity SCSI HD + DDS4 DAT	\$8742
DVMS 100	DV1-SE-TPD	Fixed Extended Capacity SCSI HD + DDS4 DAT	\$6832
Ext. DAT-400	DV4-TAPED-A	20GB DDS4 SCSI DAT Drive, External for DVMS 400	\$2923
Ext. DAT-100	DV1-TAPED-A	20GB DDS4 SCSI DAT Drive, External for DVMS 100	\$2923
